

CreativeDesigner™ Introduction

Introduction: CreativeDesigner™ is a new tool Statler Stitcher has created to fulfill a demand in the pattern designer world. It does single or mass conversion of patterns from DXF to CSQ, CSQX, QLI, or PAT in one simple step. It also does quick mass conversion of patterns files into BMP thumbnails; these are used on pattern designer websites and catalogs. CreativeDesigner™ performs 1000 conversions in a few seconds, using older methods it would take days to accomplish.

The target customer for this product is professional quilters and pattern designers. This product will greatly reduce their work load and improve the quality of their thumbnails and encrypted patterns. Designers who own competitor machines will be able to use CreativeDesigner™ for making patterns for sale to Statler owners.

The price for CreativeDesigner™ is \$200. Gammill sales will receive payment and return a unique license file in return. CreativeDesigner™ is protected such that it cannot be used without a license.
